Bosch Group

FCC Warning

The equipment has been tested and found to comply with the limits for a Class B device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy, and, if not installed and used in accordance with instructions, may cause harmful interference with radio communications. However, there is no guarantee that radio interference will not occur in particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to contact the dealer or an experienced Radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

CAUTION
- The use of optical instruments with this product will increase eye hazard.
- Because the invisible laser beam in this compact disc player is harmful to the eyes, do not attempt to disassemble this cabinet. Refer servicing to qualified personnel only.

SAFETY CERTIFICATION
This Compact Disc Player is made and tested to meet exacting safety standards. It meets FCC requirements and complies with safety performance standards of the US Department of Health and Human Services.

Owner's Record

The model and warranty numbers are located on the top of the unit. Record the warranty (serial) number in the space provided below. Refer to these numbers whenever you call upon your Blaupunkt dealer regarding this product.

Features

Congratulations on your purchase of this Blaupunkt CD Receiver. Its Codem III-US FM/AM Tuner, 3-Beam Laser/Anti-Vibration & Shock mechanism provide the ultimate in sound reproduction. Its high-power amplifier and 4-Channel RCA preamp output provide you with tremendous system configuration flexibility. It's auxiliary input jack lets you easily incorporate portable audio equipment, such as a cassette or DAT player, into your car's sound system. Blaupunkt's exclusive Direct Software Control Menu allows you to customize many of the units features to your specific preferences.

- Codem III-US Tuner Features:
  - Multipath Management
  - ASU Electrical Impulse Noise Reduction
  - Superior AM Frequency Response
  - 18 FM/6 AM Presets, Including 6 FM & 6 AM Travelstore Presets
  - Station & Preset Scans
  - Station Naming
  - Tuner Timer
  - Local/Distant Seek & Manual Tuning

- CD Player Features
  - Track Up/Down
  - Scan, Mix, Repeat
  - Cue/Review & Pause/Play
  - CD IN Indicator
  - Last Position Memory
  - 3-Beam Laser Pick-Up
  - 1 Bit/8 Times Oversampling Digital Filter
  - Silicone-Oil Dampened Anti-Vibration and Shock CD Mechanism

Your unit's fully-detachable front faceplate makes the unit useless to would-be thieves.

- Audio Features:
  - 35 Watts x 4 Channel Integrated Amplifier
  - Dual-Level Fader
  - Over 3 Volts of Distortion-Free Preamp Output 4-Channel, Low Impendance (200 Ω Preamplifier)
  - 2-Channel RCA Preamp Output Harness Included
  - Bass,Treble, Balance, Fader Controls
  - Source Tone & Loudness-Level Memory
  - Adjustable Maximum Turn-On Volume & Mute
  - Auxiliary Input

- Other Features:
  - 16 Direct Software Control Menu Options
  - Detachable Face with Hardshell Case
  - Green Illumination
  - Source Display Priority
  - Clock/Ignition-Off Clock Recall
  - 180 x 50 x 155 mm (7 x 2 x $6^{1}/_{8}$ in.) DIN/ISO Chassis
  - Detachable Wire Harness w/Bullet Connectors
  - Snap-In DIN Sleeve & Mounting Hardware
  - Side Bracket Compatible
  - Optional RC-06H Wireless Remote Control included
    Optional Thummer™ Steering Wheel Mounted Wireless Remote Control

Designed, Engineered and Manufactured By Blaupunkt.

Traffic Safety and Precautions

- Do not adjust your unit in difficult driving conditions that demand your full attention.
- As the driver of a motor vehicle, it is your responsibility to pay attention to the traffic situation at all times. Never use your unit in a way that could distract you.
- Always make sure that you are still able to hear any warning signals coming from outside of the vehicle, such as police or fire engine sirens, so that you can react accordingly.
- If your vehicle was parked in direct sunlight resulting in a considerable rise in temperature inside the vehicle, allow the unit to cool off before operating your unit.
- The use of optical instruments with this product will increase eye hazard.
- Because the invisible laser beam in this compact disc player is harmful to the eyes, do not attempt to disassemble this cabinet. Refer servicing to qualified personnel only.
- You are cautioned that any changes or modifications not expressly approved in this manual could void your warranty.
- Car Wash precaution - If you have a motorized antenna, make sure to turn off the unit – not just the tuner – so that the antenna is lowered and antenna damage is prevented!

Detachable Face

ENGLISH

Detaching & Attaching the Face:
The face of this unit can be detached and taken with you to prevent it from being stolen.

Detaching the Face:
Before detaching the face, be sure to press the PWR Button first. Then press the REL (Release) Button and detach the face by gently pulling it off as illustrated.

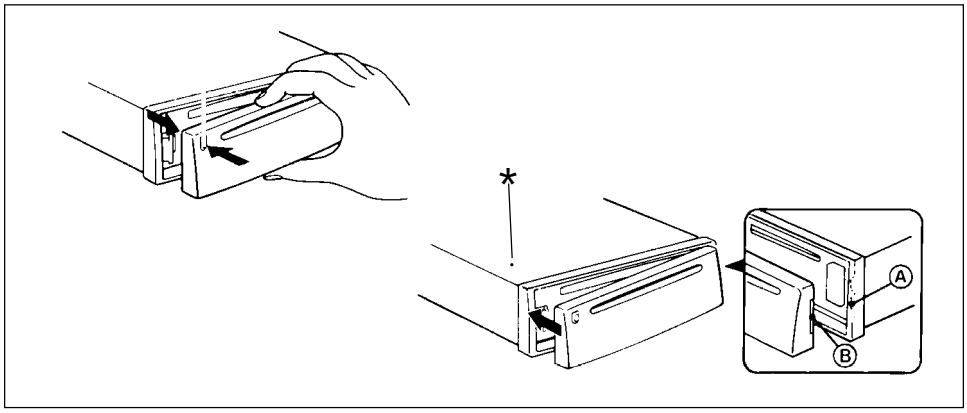
Note: Do not pull it straight out from the chassis. Be sure not to drop the face when detaching it from the chassis.

Attaching the Face:
Apply the right hand side of the face to the chassis by sliding (part B) of the face to (part A) at the front of the chassis. Gently push the left side of the face against the front of the chassis until it snaps into place.

Note: Make sure that the face is inserted right side up. Do not press against the display window. Do not press hard against the face when attaching it to the chassis, it may be easily attached with gentle pressure. When carrying the face with you, put it in the carrying case. Do not expose the face to direct sunlight, heat sources such as hot air ducts or leave it in a humid place. Never leave it on the dash board of a vehicle parked in direct sunlight, where there may be a considerable rise in temperature inside the vehicle.

Affixing Faceplate For Retail Display:
The faceplate can be affixed to the unit's chassis, which is desirable for a retail display, for example.

To affix the faceplate:
Insert the black bolt into the hole at the left front of the top of the radio. See* below.



Electrical Connections and Installation

@/<?#&*>@! To avoid the aggravation of costly mistakes and serious damage that could make you feel this way, please carefully read all of the instructions before you begin. Carefully follow all instructions. You'll be glad you did!

GENERAL RECOMMENDATIONS

- If you're not confident that you can install the unit correctly, have it installed by a qualified Blaupunkt installation technician.
- Use this unit only with negative ground 12 Volt (11-16 Volt) direct current (DC).
- Be sure to detach the faceplate before you start to connect or install the unit.
- Don't assume that a seemingly matching wire harness in the vehicle has leads that match the leads of the unit's wire harness.
- We recommend making and testing all electrical connections before installing the unit. Connect the leads (wires) according to instructions and diagram below.

ELECTRICAL CONNECTION INSTRUCTIONS

1. Disconnect the vehicle battery's negative terminal before making connections.
2. Connect the speakers and/or external amplifiers (if you have any) following the guidelines in the SPEAKER CONNECTION section below.
3. Connect the blue (trigger output) lead to an antenna motor trigger switch input terminal (if you have one). (Maximum amperage required must not exceed 150mA.)
4. If you have an external amplifier, connect the blue/white lead to the amplifier's trigger switch terminal. DO NOT connect the blue/white lead to the antenna's power supply input. (Maximum amperage required must not exceed 150mA.)
5. If you have a cellular telephone set that has a mute lead (lead that supplies constant ground when telephone is in use), connect it to the dark green lead.
6. Connect the black (power ground) lead to a grounded metal part on the vehicle. We recommend grounding all audio system black ground leads (receiver, external amplifier, etc.) to a common grounding point, preferably a non-painted surface under the instrument panel.
7. Connect the yellow (constant power) input lead to a source of constant battery power, preferably a terminal to an appropriate slot in the fuse box.
8. Connect the red (turn-on power) input lead only after the other leads are connected. Be sure to connect the red lead to a positive (+) 12 Volt power terminal that is energized only when the ignition key is set to the on position or accessory position.
9. Cover the ends of any unused leads with electrical tape. This will prevent them from touching the vehicle or each other and causing a short-circuit and damage to the unit or vehicle.
10. Reconnect the vehicle's battery.
11. Verify that no fuses have blown.
12. Plug the harness into the unit.
13. Attach the faceplate and test the unit.

Once the connections have been successfully made, you can begin to mount the unit.

SPEAKER CONNECTIONS

The unit's Dual-Level Fader allows you to fade between the front and the rear channels using either the front and/or rear speaker leads and/or the rear preamp outputs, providing you tremendous flexibility in configuring your speaker arrangement:

- You can connect a speaker (regular, co-axial or tri-axial speakers or component speaker system, all hereafter referred to simply as "speaker") to each of the units' four pairs of speaker leads.
- You can connect the 2 RCA preamp outputs to multiple external amplifiers and power multiple speakers or speaker systems through the amplifiers. (Blaupunkt amplifiers and speakers available separately). To add front preamp output, purchase Blaupunkt part 8634494218.
- You can use a either or both of these two methods.

Connecting the Speaker Leads
To prevent short circuits or serious damage to the unit and/or speakers:

- Connect the speaker leads only as indicated in the wiring diagram. Disconnect the vehicle

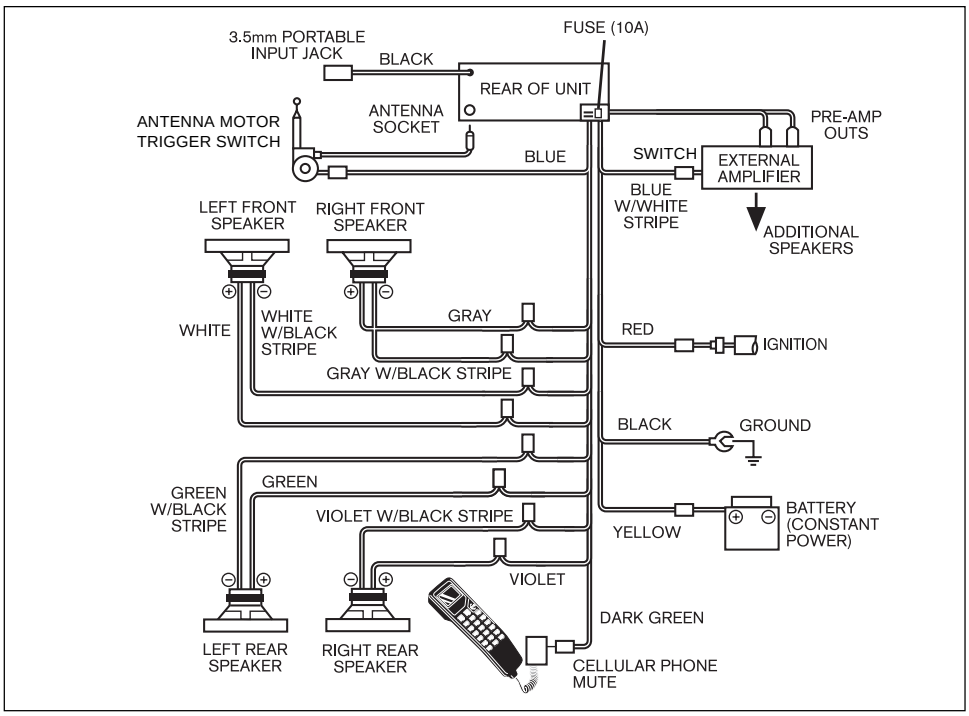
battery's negative terminal before making connections.

- Only use speakers that have impedance ratings of 4 ohms or higher and have power-handling capabilities greater than the receiver's stated power level.
- The unit's internal amplifier is designed to handle a 4-ohm load on each pair of speaker leads.
- DON'T connect two speakers to a single pair of speaker leads ("in parallel") unless both speakers each have at least 8 ohms impedance.
- DON'T connect the left and right speaker leads to each other or to the same speakers.
- DON'T connect the front and rear speaker leads to each other or to the same speakers.
- DON'T connect the negative speaker leads to each other.
- DON'T connect the positive speaker leads to each other.
- DON'T connect any active speakers (with built-in amplifiers) to the speaker leads unless their owner's manuals specifically state that this is O.K.
- Cover the ends of any unused leads with electrical tape. This will prevent them from touching the vehicle or each other and causing a short-circuit and damage to the receiver or vehicle.

Connecting the Pre-Amp Outputs to External Amplifier(s)

To prevent short circuits or serious damage to the receiver, amplifier, and/or speakers:

- Follow the amplifier's instructions on how to connect the unit's preamp outputs to the amplifier(s) and connect the speaker(s) directly to the amplifier.

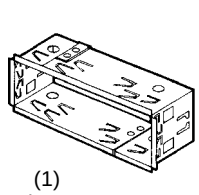


Installation

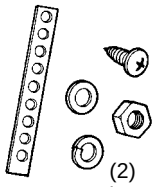
Recommendations

- Carefully choose the mounting location so that the unit won't interfere with normal driving.
- Avoid mounting locations where the unit would be subject to high temperatures, such as from direct sunlight or hot air from the heater, or where it would subject to dust, dirt or excessive vibration.
- The illustration below shows a typical installation, however, you may need to adjust the installation, depending on the unit. If you have questions or need additional installation hardware, consult your Blaupunkt dealer.
- Make sure the unit is firmly anchored (preferably at both front and back) and does not vibrate.

Mounting Hardware



(1)
Sleeve

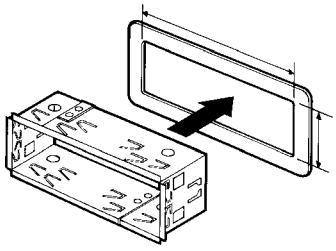


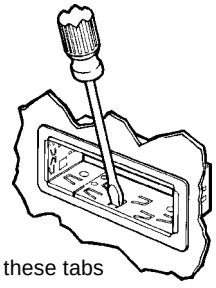
(2)
Mounting Strap
and Screw

(3)
Release Keys

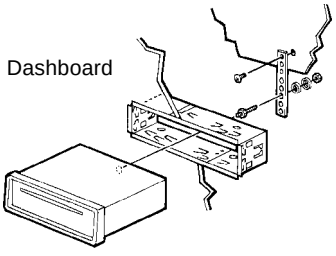
Mounting The Unit in Most Dashboards

1 Install the Sleeve (1) in the dashboard.
2 Select and bend the appropriate tabs to hold the sleeve firmly in place.
3 A. Attach the Mounting Strap (2) to the underside of the dashboard, using screw.
B. Attach the back of the unit to the mounting strap using the support stem bolt and hardware.





Bend these tabs



Dashboard

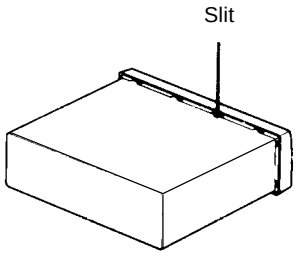
Mounting the Unit in a Japanese Car

You may have difficulty mounting this unit in some Japanese cars that have ISO mounting features (side-bracket mounting systems). In this case, consult your Blaupunkt dealer.

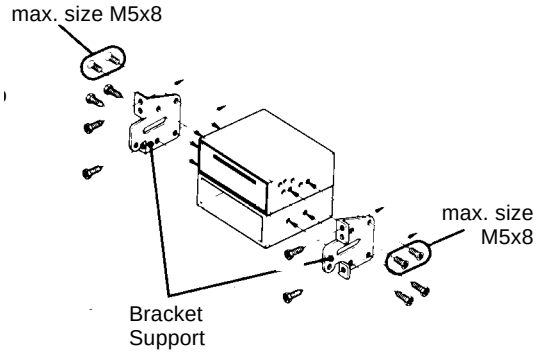
1 Run a blade along the slits on the back of the front trim ring and separate it from the unit.
Save the trim rin in case you ever in case you ever want to instal the unit in another vehicle.

2 Use the vehicle's own mounting hardware to attach the unit.

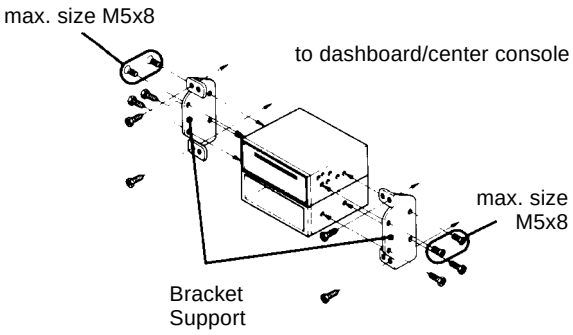
1



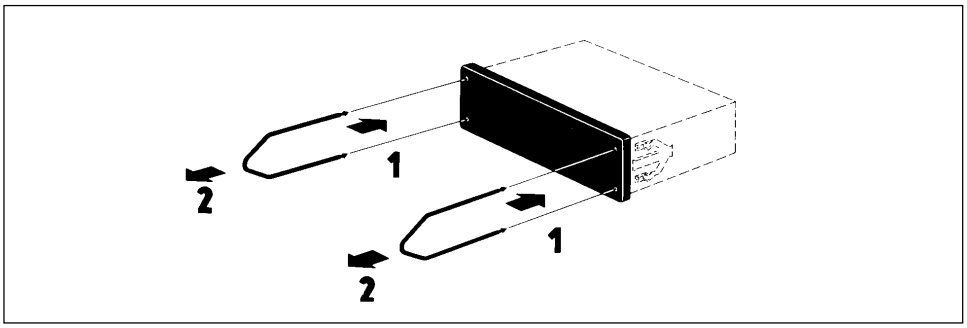
2 TOYOTA



2 NISSAN



Maintenance



Removing the Unit
Use the Release Keys as shown below. Keep them in a safe place in case you need them in the future.

Fuse Replacement
When replacing the fuse, be sure to use one with the correct amperage, which will be stated on the fuse case. Never use a fuse that has a stated amperage exceeding the one supplied for this unit, as this could cause malfunction and serious damage to the unit.

Cleaning the Connectors
The unit may not operate properly if the connectors between the unit and the face are contaminated with dirt. In order to prevent this from happening, remove the face from the unit by pressing the REL (Release Button), then detach it and clean the connectors from time to time. Clean the connectors with a cotton swab and isoprophyl alcohol (90% or higher). Be sure to clean them with a vertical motion. Never clean them horizontally, because this could damage the contact points.

Specifications

Audio Power Specifications

Power Output and Total Harmonic Distortion: 13.5 watts per channel minimum continuous average output into 4 ohms, 4 channels driven, from 30-15,000 Hz with no more than 1% total harmonic distortion.

Other Specifications

Tuner

FM

Tuning Range:	87.5 - 107.9 MHz
Intermediate Frequency:	10.7 MHz
FM Mono Sensitivity:	13 dBf
Seek lo sensitivity:	51 dBf
Seek sensitivity	31 dBf
Selectivity:	80 dB at 400kHz
Signal-to-Noise Ratio:	65 dB (stereo), 70 dB (mono)
Harmonic distortion at 1 kHz:	0.7% (stereo), 0.5% (mono)
Separation:	30 dB
Frequency Response:	30-15,000 Hz ± 3 dB

AM

Tuning Range:	530 - 1,710 kHz
Seek lo sensitivity	50 dBµV
Seek sensitivity:	25 dBµV
Intermediate Frequency:	450 kHz
Signal-to-Noise Ratio:	50 dB
Frequency Response:	30-5,000 Hz ± 3dB

CD Player

Signal-to-Noise Ratio:	90 dB
Dynamic Range:	90 dB
Frequency Response:	5-20,000 Hz ± 3 dB
Harmonic Distortion:	.01%

Audio

Speaker Impedance:	4-8 ohms
Maximum Amp Power:	4 X 35 Watts (at 4 ohms)
RMS Power:	4 X 13.5 Watts (at 4 ohms) <1% THD
Bass Control:	± 10 dB @ 100 Hz
Treble Control:	± 10 dB @ 10 kHz
Loud1:	+ 8 dB @ 60 Hz & + 2 dB @ 8 kHz
Loud2:	+ 12 dB @ 60Hz & + 4 dB @ 8 khz
Preamp Outputs:	4-Channel, Low-Impendance (200 Ω) Preamplifier
Preamp Output Voltage:	Over 3 Volts of Distorsion-Free Preamp Output

General

Dimensions (w/o projecting parts/controls):	180 x 50 x 155 mm 7 x 2 x 6 1/8 in.
Mass:	Approx. 1.4 kg (3.0 lb.)
Power Requirement (neg. grnd.):	12 V DC car battery (11-16 V DC allowable)
Operating Temperature:	15°F to 120°F, –10°C to 50°C
Supplied Accessories:	• Unit • Faceplate • Wire Harness, including 2-Channel RCA Preamp Output Harness • DIN Sleeve • Mounting Hardware • Owner's Manual in English, French, Spanish and Portuguese • RC-06H Wireless Remote Control
Optional Accessories:	• 4-Channel Preamp Output Harness (Part No. 8634494218) • Thummer™ Steering Wheel Mounted Wireless Remote Control

Instructions — General Operation

See Traffic Safety & Precautions on page 4.

"Press" means a momentary press of less than 1/2 second. All presses requiring more than 1/2 second are followed by beep. (Beep for all button presses available through Direct Software Control Menu.)

"Time Out" When additional button presses are anticipated to complete a procedure, the unit will automatically exit the procedure after 4 seconds of inactivity. (8 for Menu mode.)

Ignition-Off Clock Recall
Any button press while ignition off displays time for 8 seconds.

Ignition-On
Unit lights up and clock is displayed.

Demo Mode
The unit is programmed to scroll some key features across the display if no button is pressed for one minute . (You may have seen this at the store where you purchased your radio.) TO TURN THIS OFF, turn the unit on and press DIS for 8 seconds until "DEMO OFF" appears. (Pressing DIS for 8 seconds again will re-activate this feature.)

Release for Detachable Faceplate
Push REL to detach face. Already-inserted CD remains in unit. Current settings and source mode are stored, except when detach occurs during Menu mode, new Menu settings are not stored. If power was not switched off before face removed, unit will automatically power-on when face is reattached.

Power (PWR) On/Off
When ignition on, press PWR or insert a disc to turn unit on. Last-used source becomes active, unless unit is turned on by inserting disc, in which case CD player becomes active. Display sequence at Power-On:

1. Turn-On Message (To turn message off or modify message, see Menu, page 19.)
2. "RADIO", "CD PLAY" or "AUX IN".
3. Functional information sequence (See Display Options, below.)
4. Priority display for active source.

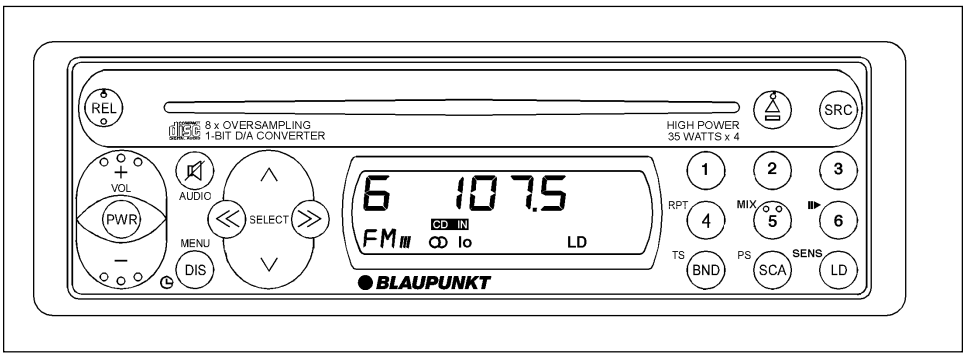
Display Options
Press DIS to change information shown at times when no manual or automatic activity takes place. Choice of priority display is separate for each audio source:

Radio: Station Name (if named) —> Frequency —> Clock
CD: Track No./Elapsed Play Time —> Clock
AUX: "AUX IN" - Clock

After a change in source, radio station or CD play, the current source's non-clock displays are shown in sequence, then display returns to current source's priority display.

Source (SRC)
Use SRC to select source - radio or CD (if already inserted) and/or auxiliary input (even if no input on aux in line) as per model's features.

Power Off
Press PWR for more than 1/2 second to turn unit off. Unit stores current settings for source, station or track, etc. Antenna and amplifier trigger wires shut off voltage. (If faceplate still attached, display switches to clock.)



Audio Operation

Volume Control Buttons (+/–)
Press + and - to increase/decrease volume from 0 to 63, in increments of 1.25 dB/step. Volume control is accessible from all modes except Name Access and Edit modes.

Mute & Cellular Mute
Press Mute to temporarily reduce volume to level set under Menu. “MUTE” appears. (Same mute level is also activated by cellular mute (if connected). “TEL MUTE” appears.) Mute or cellular mute is terminated by pressing any button. (Cellular mute is also ended by ending cellular telephone use.) If volume level lower than mute level, lower volume level is maintained, even though “MUTE” appears.

Automatic Source Tone Memory
Bass and treble adjustments made are source specific, allowing different settings for each source (FM, AM, CD, Auxiliary) as is Loudness.

Bass, Treble, Balance and Fade
Press Mute/AUDIO for more than 1/2 second to access Bass. Subsequent presses access Treble mode, then Balance/Fader mode.

Bass -Adjust from +7 to -7 at 2 dB/step using >> or /\ to increase bass, << or V to decrease.

Treble - Adjust from +7 to -7 at 2 dB/step using >> or /\ to increase treble, << or V to decrease.

Balance/Fade (“BAL/FADE”) Adjust balance from L9 (all the way left) using << to R9 (all the way right) using >>. Adjust fader from F9 (sound only from the front) using /\ to R9 (sound only from the rear) using V.

Loudness (LD)
Press LD to increase sound of low and high frequencies. Loudness level set under Menu and is source dependent. LD icon appears. To cancel, press LD again.

Radio Operation

Once tuning is complete, radio display sequence follows.

Last Station Memory
Each FM bank and AM band has its own last station memory which holds last-tuned frequency for that band or bank irrespective of whether that frequency is stored into a preset.

BND Button
Press BND to access FM1, FM2, FM3/FMT, AM/AMT banks. When in radio mode, advances to next bank. When in other source, returns to last-tuned bank.

Seek Tuning
Press /\ or V to seek next receivable frequency. Tuning stops at frequency that fulfills sensitivity requirements predetermined by sensitivity set through SENS/LD button. Press of /\ or V buttons for more than 1/2 second seeks next receivable frequency after button is released.

Tuning Sensitivity (SENS)
Press SENS/LD for more that 2 seconds to switch between lo and dx search sensitivity.

Radio Reception Hints
- When listening to weak or distant AM stations, adjusting the Treble to minimum (-7) will reduce noise and improve sound.
- In general, set SENS to DX if in rural areas or where stations tend to be weak and distant, and to LO when in metropolitan areas or where stations tend to be strong and local.

Stereo Symbol
Stereo symbol turns on if a stereo station with an incoming signal of 20 dBµV is received. The unit gradually switches between mono to stereo automatically.

Manual Tuning
Press << or >> and frequency will go one channel/step in direction pressed. Press and hold causes continuous manual tuning.

Preset Station Storage
After tuning desired frequency on desired band, press and hold a Preset Button for more than 2 seconds to store current frequency. Audio is muted during storage, preset number appears, and beep acknowledges storage. No preset storage during seek, scan or Travel Store.

Preset Station Selection
Press desired Preset Button.

Travel Store
This feature allows you to automatically store stations onto all 6 preset buttons and is especially useful when traveling outside your normal listening area. In any FM Bank, press BND for 2 seconds to activate FM Travel Store. (In AM Bank, press BND for 2 seconds to activate AM Travel Store.) T STORE appears, followed by seek-type display of frequency and preset numbers. Beginning at the bottom of the band, TS stores six strongest stations, one on each of the six preset buttons, in decreasing order of signal strength, and returns to preset 1. Pressing any presets or BND or scan cancels search operation. When source is changed during Travel Store, operation completes itself, despite source change.

Station Scan Tuning
Press SCA. “STA SCAN” appears, then frequency blinks (along with preset number if appropriate) during scanning. Unit stops at receivable stations for scan time set under Menu. Unit continuously scans until user stops scan by pressing SCA, another tuning button, SRC, or MENU button.

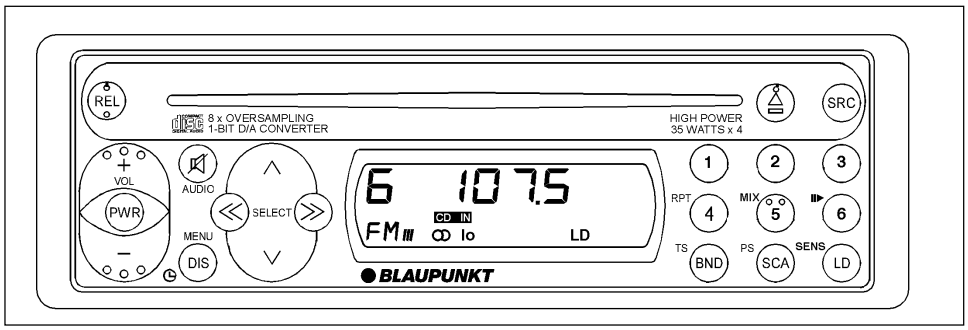
Preset Scan Tuning
Press PS/SCA for more than 2 seconds. “PS SCAN” appears, then frequency and preset number blink during scanning. Unit starts at FM1/Preset 1 (or AM/Preset 1) and proceeds through all presets (in FM all three banks) and returns to frequency tuned prior to PS activation and stops. Stops earlier if user presses another tuning button, SCA, SRC, or MENU button. Unit skips past preset frequencies that do not meet minimal seek-tuning threshold.

Tuner Timer and Station Naming (See pages 20 and 21)

Compact Disc Play Operation

Once CD playback adjustment is complete, CD display sequence follows.

CD Insertion
Make sure that “CD IN” isn’t lit. Insert a disc into Disc Slot with printed surface facing up. Playback starts at beginning of first track.



CD Playback
When a CD is already in unit, press SRC as needed to activate “CD PLAY”.

CD Eject
Press eject. Disc ejects. If disc is not removed within about 5 seconds (unless ignition off) or if eject is pressed again within this time, disc is automatically reloaded, although unit stays with current audio source. Press the SRC as required to access “CD PLAY” and restart disc playback.

Insert/Eject Summary			
Activity	**Ignition Off Unit Off**	**Ignition On/ Other Source**	**Ignition On/Power On/**
Insert	No Reaction becomes active	Turns Unit On, becomes active source.	CD Player source.
Eject	Disc ejects. Stays out unless other button pressed.	Disc ejects. After 5 seconds, disc re-inserts.	Disc ejects. After 5 seconds, disc re-inserts.

Track Up/Down
Press << and >> to select track. Track Number and elapsed play time appear. Pressing << will restart current track if more than 1 second of track has been played. If less than 1 second, unit goes to beginning of previous track.

CD Track Cue and Review
Press and hold >> and << for audible cue/review.

CD Track Repeat Play
Press RPT to play current track repeatedly. (This cancels MIX or SCAN if previously active.) RPT1 appears. If track manually advanced, RPT becomes active for new track. To cancel, press again.

Mix Play
Press MIX to play tracks in random order. (This cancels RPT or SCAN, if previously active.) A track will not be played a second time until all tracks have been played. To cancel, press again.

CD Track Scan
Press SCA to start Track Scan. SCA deactivates any active MIX or RPT modes. “TRCKSCAN” appears for 2 seconds. Track No. and Elapsed Play Time blink during scanning operation. Unit stops at each track for time set under Menu. Unit continuously scans until user stops scan by pressing a SCA, source control, or MENU.

Pause
To pause, press II>. To cancel, press again or press other playback-related button.

CD Player Reset
In unlikely case of CD player trouble, reset CD player by turning unit’s power and/or ignition off, and then power on unit. (See TROUBLESHOOTING on page 19.)

Auxiliary Input Jack

Connect other audio equipment, such as a portable cassette or DAT player, through the 500mV/3.5 mm pigtail connector. Access auxiliary equipment output by pressing SRC until “AUX IN” appears. Adjust volume, bass, and treble settings through the receiver.

Direct Software Control Menu

Blaupunkt’s exclusive Direct Software Control Menu has many unique features that allow you to customize the unit to your needs and preferences. All Menu options (except timer and naming options) are available regardless of which source is in use: AM, FM, CD, CD Changer, Auxiliary.

Using the Menu (See Traffic Safety & Precautions on page 4)
1. Press DIS/MENU for 2 seconds to enter Menu mode.
2. Press /\ / V controls to scroll through Menu.
3. Use << or >> to change Menu setting (or to enter Turn-on Message Enter, Clock Adjustment Modes, Timer Set, Station Name Access/Edit)
4. Exiting Menu: Press of DIS (or after 8 seconds). Unit exits from Menu. Changes are stored upon manual or automatic time-out of Menu or turn-off by PWR button — but not stored if exit caused by panel release or ignition off.

Turn-On Message Activation: (“MSG ON”/”MSG OFF”) Press << or >> to turn message on or off.

Turn-On Message Programming: (“MSG ENTR”) - The unit can scroll a 40-character message across the display at the time of turn-on. To create your own message:
1. Press >> button. Eight characters appear with the first one blinking.
2. Press /\ / V to select desired characters. If you want to put a blank space in name, select “_”.
3. Press << or >> to locate next character.
4. After eighth character (the farthest right character) is completed, first (left-most) character of next group of eight characters begins to flash. After fifth group of eight characters, pressing >> will access first group again.
5. Press Mute to store turn-on message and return to Menu.

Clock Adjustment (“CLOCKSET”)
Pressing << or >> shows blinking time. Subsequent press of << advances the hour; >> advances the minutes. (To change minute indicator to nearest hour (:00), press Mute button). Unit begins keeping the time when /\ or V is pressed or when Menu mode ends.)

Tuner Timer Set Mode (“TMR SET”)
1. Before entering Menu, tune in the radio frequency to be activated by timer.
2. Enter Menu mode and scroll to “TMR SET” by pressing /\ or V.
3. Press << or >> to enter timer adjustment mode.
4. Select time that unit should switch to this station by pressing << to adjust hours, >> to adjust minutes. Press Mute to adjust minutes to :00.
5. To store station and time, press /\ / V or DIS.

Tuner Timer On/Off (“TMR ON”/“TMR OFF”)
Tuner timer allows unit to go to a certain frequency at a certain time — from any source. When ignition on and unit off, the timer even turns the unit on and goes to the specified frequency. Press << or >> to turn Tuner Timer on or off.

Scan Times
You can set different scan times for CD (“CD SCNTM”) & Radio (“RD SCNTM”) between 1 and 16 seconds. Press << or >> to adjust scan time.

Confirmation Beep On/Off (“BTTNBEEP”)
To activate or defeat beep for all button presses, press << or >>. (Button presses requiring more than 1/2 second always have confirmation beep.)

Adjustable Mute Level (“MUTE LVL”)
The unit’s mute level can be adjusted to any volume level. This mute level also applies to cellular mute. During Menu mode, once “MUTE LVL” appears, actual mute level is heard. Adjust the mute level volume by using <</>>, **NOT + and –**. (If mute is activated when unit volume level is lower than mute level, unit volume level is maintained, even though “MUTE” appears.

Maximum Turn-On Volume Level (“MAXONVOL”)
Sets maximum volume that is heard when unit is turned on. (Once “MAXONVOL” appears, actual MAXONVOL level is heard.) Adjust the MAXONVOL volume by using <</>>, **NOT + and –**. If unit is turned off while volume is louder than MAXONVOL, turn-on volume will be at MAXONVOL level. However, if unit is turned off when volume level is lower than MAXONVOL, turn-on volume will be at level it was when unit was turned off.

Loudness Levels
You can choose between two loudness settings for each audio source: “LOUD AUX”, “LOUD CD”, “LOUD AM”, “LOUD FM”. “LOUD 1” provides up to 8 dB boost in bass (centered at 60 Hz) and up to a 2 dB boost in treble (centered at 8 KHz). “LOUD 2” provides up to 12 dB boost in bass (centered at 60 Hz) and up to a 4 dB boost in treble (centered at 8 KHz). To set the loudness level for each source, use << and >>.

Radio Station Naming (“STN NAME”)
Available only while radio is active source. One name per frequency, 8 characters per name. (Names can be assigned to any frequency, preset or not.) If you try to enter more than 30 names, “**FULL**” appears. You can then enter new names after erasing some of existing names.

To store station names:

1. Press DIS for more than 2 seconds to enter Menu mode.
2. Scroll to Radio Station Naming feature by pressing /\ / V .
3. Enter Station Name Access mode by pressing << or >> button.
4. Tune to desired station using BND, presets or /\ / V buttons. If previously named, name appears.
5. Press << or >> buttons to enter Station Name Edit mode. Eight “_” appear with first one blinking.
6. Press /\ / V to select character. Select “_“ for a blank space.
7. Press << or >> buttons to select next character position.
8. Press Mute to store name. Display blinks STORING twice before return to Station Access mode.
9. To name another station, repeat steps 4-8.
10. To return to Menu, press Mute again.

(There is no time-out from Station Name Access & Edit modes.)

Display Priority & Radio Station Names (See Display Options on page 13)

Changing a Radio Station Name
Repeat steps 1 to 10 in Radio Station Naming, changing only those characters that you wish to change.

Erasing ONE Radio Station Name
Access Station Access mode (See Radio Station Naming, above.) Choose station with name to be deleted. When name appears, press Mute for 2 seconds. Beep sounds. Release now to delete this name. “NAME” and “DELETED” blink alternately.

Wireless Remote Control

For added convenience you can control key features of your Blaupunkt 5 Series Receiver with either of two Blaupunkt wireless remote controls, the RC-06H or the Thummer™.

The unique Thummer mounts to the inside of the steering wheel rim and allows you to control the receiver without taking your hand off the steering wheel. The RC-06H is a credit card-sized remote control. To receive wireless commands, your receiver is equipped with a built-in infrared sensor (or “eye”) on the faceplate.

Both of remote controls have the following buttons: SRC, SCA, +/- /\, V, << and >>. You can use them to activate all of the same features as you would using the corresponding buttons on front of the unit itself.

See your Blaupunkt dealer for details.

Troubleshooting Guide

The following check will assist in the correction of most problems which you may encounter with your unit. Before going through the check list below, refer back to the connection and operating procedures.

General

Trouble	Cause/Solution
No sound.	• Adjust the volume with the + button. • With a two-speaker system set the fader control to the center position.
Indications do not appear on the display window.	• Remove the front panel and clean the connectors. See **"Cleaning the Connectors**'' of **"Maintenance**'' for details.

Radio reception

Trouble	Cause/Solution*
Preset stations are not receivable.	• The broadcast is too weak.
Automatic tuning is not possible.	• The broadcast is too weak. —> Use manual tuning.
Travel Store feature does not complete storing of six stations.	• Not enough broadcast frequencies are receivable.

* Also make sure that antenna is connected, extended and dry inside.

CD operation

Trouble	Cause/Solution
CD play does not start.	• Dusty or defective disc. • The ambient temperature is more than 50°C (120°F).
The disc cannot be loaded or is automatically ejected.	• The disc is inserted with the printed side downwards.
The sound skips due to vibration.	• The unit is installed at an angle of more than 20°. • The unit is not installed on the sturdy part of a car. • Dusty or defective disc.

Error Displays

Display	Cause	Solution
"CD ERROR"	A disc problem such as an upside down or dirty disc, or a CD-ROM (computer) disc.	Insert the disc correctly. Clean the disc.

If the above mentioned solutions do not help to improve the situation, consult your nearest **Blaupunkt** dealer or in the United States call 1-800-266-2528.
